SUBJECT INDEX

Acutance and granulance, 125
Algorithms for halftoning images, visual model-based, 151
Analysis of spatially correlated images with implications for independent sampling and linear correlator image detection, 193
Anisotropy on subjective image quality, effect of sampling, optical transfer function shape, and, 24

Bandwidth, image quality experiments for TV reconnaissance at reduced transmission, 205
Biomedical applications through a digital-optical process, measurements of electron microscope image content for, 213
Black and white display of color images, pseudo-gray techniques for the, 133

Chemical techniques, improving image quality by the use of, 159
Classification from inverse synthetic aperture radar images, effect of data reduction on target, 166
Color images, pseudo-gray techniques for the black and white display of, 133
Content for biomedical applications through a digital-optical process, measurements of electron microscope image, 213
Correlated images with implications for independent sampling and linear correlator image detection, analysis of spatially, 193
Correlator image detection, analysis of spatially correlated images with implications for independent sampling and linear, 193
Correlators, image quality effects in optical, 183
Criteria for the prediction of optical system modulation transfer function, optical, 70

Data reduction on target classification from inverse synthetic aperture radar images, effect of, 166
Density and efficiency of two-dimensional (2-D) sampled imagery, information, 36
Detection, analysis of spatially correlated images with implications for independent sampling and linear correlator image, 193
Digital-optical process, measurements of electron microscope image content for biomedical applications through a, 213

Digitally derived imagery and their relation to interpreter performance, quality metrics of, 16
Display of color images, pseudo-gray techniques for the black and white, 133
Dot-formed images, quality of, 118
Dynamics of pattern vision, 10

Edge responses in phase imagery, impulse and, 103
Effect of data reduction on target classification from inverse synthetic aperture radar (ISAR) images, 166
Effect of sampling, optical transfer function shape, and anisotropy on subjective image quality, 24
Effects of mirror surface ripple on image quality, 77
Effects of tilt of a four-bar pattern on the minimum resolvable temperature difference (MRTD), 109
Electron microscope image content for biomedical applications through a digital-optical process, measurements of, 213
Electro-optical image quality summary measure, an improved, 43
Electrophotography: I. Theory, particulate model for halftone noise in, 137
Electrophotography: II. Experimental verification, particulate model for halftone noise in, 143
Endoscopes, model for the assessment of image quality in, 53
Enhancement of scanned infrared imagery, techniques for pseudo-dc restoration and dynamic range, 175
Experimental verification, particulate model for halftone noise in electrophotography: II., 143

Four-bar pattern on the minimum resolvable temperature difference (MRTD), effects of tilt of a, 109

Granulance, acutance and, 125
Gray techniques for the black and white display of color images, pseudo-, 123

Halftone noise in electrophotography: I. Theory, particulate model for, 137
Halftone noise in electrophotography: II. Experimental verification, particulate model for, 143
Halftoning images, visual model-based algorithms for, 151

Image content for biomedical applications through a digital-optical process, measurements of electron microscope, 213
Image detection, analysis of spatially correlated images with implications for independent sampling and linear correlator, 193
Image quality by the use of chemical techniques, improving, 159
Image quality, effect of sampling, optical transfer function shape, and anisotropy on subjective, 24
Image quality, effects of mirror surface ripple on, 77
Image quality effects in optical correlators, 183
Image quality in endoscopes, model for the assessment of, 53
Image quality experiments for TV reconnaissance at reduced transmission bandwidth, 205
Image quality measurement, modulation transfer function measurement system: a new development in, 94
Image quality and observer performance, 2
Image quality summary measure, an improved electro-optical, 43
Imagery, impulse and edge responses in phase, 103
Imagery, information density and efficiency of two-dimensional sampled, 36
Imagery and their relation to interpreter performance, quality metrics of digitally derived, 16
Imagery, techniques for pseudo-dc restoration and dynamic range enhancement of scanned infrared, 175
Images with implications for independent sampling and linear correlator image detection, analysis of spatially correlated, 193
Images, pseudo-gray techniques for the black and white display of color, 133
Images, quality of dot-formed, 118
Images, visual model-based algorithms for halftoning, 151
Improved electro-optical image quality summary measure, an, 43
Improving image quality by the use of chemical techniques, 159
Impulse and edge responses in phase imagery, 103
Information density and efficiency of two-dimensional sampled imagery, 36
Infrared imagery, techniques for pseudo-dc restoration and dynamic range enhancement of scanned, 175
Interpreter performance, quality metrics of digitally derived imagery and their relation to, 16
Inverse synthetic aperture radar (ISAR) images, effect of data reduction on target classification from, 166

Linear correlator image detection, analysis of spatially correlated images with implications for independent sampling and, 193

Measurements of electron microscope image content for biomedical applications through a digital-optical process, 213
Metric, subjective evaluation of a perceptual quality, 200
Metrics of digitally derived imagery and their relation to interpreter performance, quality, 16
Microscope image content for biomedical applications through a digital-optical process, measurements of electron, 213
Minimum resolvable temperature difference, effects of tilt of a four-bar pattern on the, 109
Mirror surface ripple on image quality, effects of, 77
Model for the assessment of image quality in endoscopes, 53
Model-based algorithms for halftoning images, visual, 151
Model for halftone noise in electrophotography: I. Theory, particulate, 137
Model for halftone noise in electrophotography: II. Experimental verification, particulate, 143
Modulation transfer function measurement system (MTFMS): a new development in image quality measurement, 94
Modulation transfer function, optical criteria for the prediction of optical system, 70

Noise in electrophotography: I. Theory, particulate model for halftone, 137
Noise in electrophotography: II. Experimental verification, particulate model for halftone, 143

Observer performance, image quality and, 2
Optical correlators, image quality effects in, 183
Optical criteria for the prediction of optical system modulation transfer function (MTF), 70
Optical process, measurements of electron microscope image content for biomedical applications through a digital-, 213
Optical system modulation transfer function, optical criteria for the prediction of, 70
Optical transfer function shape, and anisotropy on subjective image quality, effect of sampling, 24

Particulate model for halftone noise in electrophotography: I. Theory, 137
Particulate model for halftone noise in electrophotography: II. Experimental verification, 143
Pattern on the minimum resolvable temperature difference, effects of tilt of a four-bar, 109
Pattern vision, dynamics of, 10
Perceptual quality metric, subjective evaluation of a, 200
Performance, image quality and observer, 2
Performance, quality metrics of digitally derived imagery and their relation to interpreter, 16
Phase imagery, impulse and edge responses in, 103
Prediction of optical system modulation transfer function, optical criteria for the, 70
Process, measurements of electron microscope image content for biomedical applications through a digital-optical, 213
Pseudo-dc restoration and dynamic range enhancement of scanned infrared imagery, techniques for, 175
Pseudo-gray techniques for the black and white display of color images, 133

Quality by the use of chemical techniques, improving image, 159

Quality considerations, synthetic aperture radar image, 58
Quality of dot-formed images, 118
Quality, effect of sampling, optical transfer function shape, and anisotropy on subjective image, 24
Quality, effects of mirror surface ripple on image, 77
Quality effects in optical correlators, image, 183
Quality in endoscopes, model for the assessment of image, 53
Quality experiments for TV reconnaissance at reduced transmission bandwidth, image, 205
Quality measurement, modulation transfer function measurement system: a new development in image, 94
Quality metric, subjective evaluation of a perceptual, 200
Quality metrics of digitally derived imagery and their relation to interpreter performance, 16
Quality and observer performance, image, 2
Quality summary measure, an improved electro-optical image, 43

Radar image quality considerations, synthetic aperture, 58
Radar images, effect of data reduction on target classification from inverse synthetic aperture, 166
Range enhancement of scanned infrared imagery, techniques for pseudo-dc restoration and dynamic, 175
Reconnaissance at reduced transmission bandwidth, image quality experiments for TV, 205
Reduced transmission bandwidth, image quality experiments for TV reconnaissance at, 205
Restoration and dynamic range enhancement of scanned infrared imagery, techniques for pseudo-dc, 175
Ripple on image quality, effects of mirror surface, 77

Sampled imagery, information density and efficiency of two-dimensional, 36
Sampling and linear correlator image detection, analysis of spatially correlated images with implications for independent, 193
Sampling, optical transfer function shape, anisotropy on subjective image quality, effect of, 24
Scanned infrared imagery, techniques for pseudo-dc restoration and dynamic range enhancement of, 175
Shape, and anisotropy on subjective image quality, effect of sampling, optical transfer function, 24
Spatially correlated images with implications for independent sampling and linear correlator image detection, analysis of, 193
Subjective evaluation of a perceptual quality metric, 200
Subjective image quality, effect of sampling, optical transfer function shape, and anisotropy on, 24
Surface ripple on image quality, effects of mirror, 77
Synthetic aperture radar image quality considerations, 58
Synthetic aperture radar images, effect of data reduction on target classification from inverse, 166
System modulation transfer function, optical criteria for the prediction of optical, 70

Target classification from inverse synthetic aperture radar images, effect of data reduction on, 166
Techniques for pseudo-dc restoration and dynamic range enhancement of scanned infrared imagery, 175
Tilt of a four-bar pattern on the minimum resolvable temperature difference, effects of, 109
Transmission bandwidth, image quality experiments for TV reconnaissance at reduced, 205
TV reconnaissance at reduced transmission bandwidth, image quality experiments for, 205

Vision, dynamics of pattern, 10
Visual model-based algorithms for halftoning images, 151

White display of color images, pseudo-gray techniques for the black and, 133
